

Dental Destruction in Broken-Hill man

L'Homme de Broken Hill "*Homo heidelbergensis*" découvert en 1921, Rhodésie ou Zambie. Le plus ancien témoignage de caries multiples attribuées à un changement de régime (Puech et al. 1980. *Journal of Human Evolution*, 91 :33-39).

The earliest evidence of human dental caries comes from a sample found in 1921 during the exploitation of a zinc mine at Broken-Hill in Northern Rhodesia (Zambia).
